The benefits of alternative farming methods

At farm and village levels, trade-offs in the allocation of resources become important in determining how SCT may fit into a given farming system, and at a regional level, market conditions, interactions among stakeholders and other institutional and political factors are also important Giller et al. Inventory and quantitative assessment of geosites and geodiversity sites: a review. Food and nutritional security depends on this response.

The benefits of alternative farming methods

The project entailed the development of environmental indicators in the province, which will be used during implementation of environmental projects and during monitoring of environmental change in the province. As the experimental plots had been established for almost 4—5 years, most cultivated soils, furrows and ridges were stable; therefore, soil losses were rather low when compared to newly constructed plots. However, the most suitable combination should be determined by the needs of the farmer and the availability of markets.

Soil Conservation

The contour hedgerow systems were effective in controlling soil loss, but less than established minimum tillage data not presented. However, this is not a viable option for all farmers, and so it is necessary to develop diverse measures to combat soil degradation, which will require substantial government support. Similar amounts of soil erosion were found by Dung et al.

Soil Conservation on Sloping Land: Technical Options and Adoption Constraints

There are a number of reasons why permaculture has not been more widely adopted, or even considered.

Global achievements in soil and water conservation: The case of Conservation Agriculture

What is important to note is that while changing land use and land cover and construction of vegetative bunds in the upper parts of the catchment as part of the ICM approaches could change the catchment yield along with soil loss, withdrawal of either surface water or groundwater in the catchment to affect such changes could also cause variations in water yield received in the lower parts of the catchment. They are manifested in increased concentrations of polluting substances primarily in soils Akoto et al.

Industrial Agriculture: How Intensive Farming Affects Our Lives

Ratna Reddy, in , 2019 3. As per the national watershed management policy, the WSM committees under the chief provincial secretaries would coordinate the activities of all agencies at the rural, divisional, district, provincial, and national levels Gunawardena, n.

Naledzi

Methodical course-guide for instructors, 218 p. Despite the potential of permaculture and agroecology, mainstream agriculture continues to focus on conventional techniques.
