

# Plant growth substances.

## L. Hill - Control of *Arabidopsis* root development

Description: -

- Growth promoting substances
  - Growth inhibiting substances
  - AuxinPlant growth substances.
  - Plant science monographsPlant growth substances.
- Notes: Bibliography: p. 457-520.  
This edition was published in 1963

Filesize: 38.59 MB

### Canola growth stages

One study indicated that soil biota reduced the allelopathic potential of sticky snakeroot *Ageratina adenophora*. The term includes, amongst others: herbicides, fungicides, insecticides, acaricides, nematicides, molluscicides, rodenticides, growth regulators, repellents, rodenticides and biocides.

### Pesticides

The CEI first divides anticlinally to give rise to the CEI daughter CEID cell. Canola plant with its second true leaf. Future refinement of these models will lead to a more complete description of the complex molecular interactions that give rise to a simple growing root.

### HS944/HS186: Allelopathy: How Plants Suppress Other Plants

The root system varies with soil type, moisture content, soil temperature, salinity and soil physical structure. Pods show no external signs of stress, but affected seeds may be visibly shriveled within the pod.

### Canola growth stages

The allelopathic potential of mile-a-minute vine *Ipomoea cairica* is significantly greater at higher environmental temperatures.

### Canola growth stages

FEZ, expressed in the initial, represses SMB in the LRC daughter cell. Activation of CYCD6 by SHR and SCR plays an important role in this asymmetric cell division.

### HS944/HS186: Allelopathy: How Plants Suppress Other Plants

The pattern of cell types in the stele is bilaterally symmetric: A central axis of xylem is flanked by two phloem bundles.

### Control of *Arabidopsis* root development

Bienvenu *Annuals of Botany*, 65, 205-212. Water absorption is the first step in germination. Furthermore, allelochemistry may provide basic structures or templates for developing new synthetic herbicides.
