The methodology proves to be useful during the pre-design phase of the project, when important decisions have to be taken regarding the choice of the manufacturing route and the investments needed.

Design of Composite Structures

This enables clients to work through the Component interface to treat Leaf and Composite objects uniformly: Leaf objects perform a request directly, and Composite objects forward the request to their child components recursively downwards the tree structure. This is because it is not based on or derived from well-defined measures of safety. The client has told us that customers may join a membership program which will provide them with special offers and discounted shipping, so we have extended the customer object to provide a member and standard option.

If recipient is a leaf then request is handled directly. It focuses on the development of analysis techniques that can be used in the context of preliminary design of composite structures. It will be of equal interest to aerospace engineers and materials scientists working in academia, industry and government.
