Seattle

Cherlin 1992 and McLanahan and Sandefur 1994 note that single parents frequently do not have enough time or resources for their children. This is true across all racial and ethnic groups. Fifty years from now, there will most likely be no single majority group in the United States.

**MRSC**

Other types of households have grown much faster: those comprised of unrelated persons grew by one-third and single-person households by 12 percent, while family households grew less than one percent over the decade.

**MRSC**

From 1985 to 1990, approximately 45 percent living in nonmetro areas moved, and about 65 percent in metro areas moved. Approximately one in six households nationwide received the long form.

**Consumer Index, Seattle area — December 2020 : Western Information Office : U.S. Bureau of Labor Statistics**

The city proper had a population of 4,397,073 in the 2019 census, while the metropolitan area has a population of 9,354,580.

## 3. An Overview of Racial and Ethnic Demographic Trends

The United States is, perhaps more than any other industrialized country, distinguished by the size and diversity of its racial and ethnic minority populations. Marsh-Thornton 1981 Estimating prehistoric American Indian population size for the United States area: Implication of the nineteenth century population decline and nadir. Race and ethnic groups that grew the most quickly in Seattle were Asians, persons who are two or more races, and persons of Hispanic or Latino ethnicity.
