Coral snake

You will also find them in central Arizona and south to Sonora, Mexico.

South America's most venomous snakes

Because rattlesnakes tend to be the deadliest snakes in the United States by quite a large margin, and because Cottonmouths have a reputation for being ultra aggressive, many people are surprised to learn that the most venomous snake bites a year come from copperheads. Venomous snakes found in each U. North American species lay their eggs in the summer, and the eggs will hatch in the fall.

Venoms of coral snakes (Micrurus spp.): report on a multivalent antivenin for the Americas

Coral snakes are generally nocturnal. There was a death from water moccasin bite in June of 2017, from a male who was very intoxicated and playing with and agitating snakes. This positive stat is also credited to the availability of antivenoms and immediate medical attention.

Venomous Snakes: Identification and Bite Treatment In The Wilderness

If they do bite they are likely to do more damage than their neighbours, the copperhead. The one snake that looks a lot like them is the king snake, which can also often be found in the same environment.
