

Research methods in psychology

McGraw-Hill Higher Education - An Introduction to the Types Of Psychological Research Methods

Fill in the blanks (14)	
Key word	Definition
Primary data	Data collected first hand by the researcher (for their specific research purpose)
Secondary data	Data collected by someone else (for a different purpose) which the researcher will now use for their own research purposes.
Quantitative data	Data in the form of numbers.
Qualitative data	Data in the form of words
Independent variable	The variable which the experimenter manipulates (changes) to see its effect on the Dependent Variable
Dependent variable	The variable which the experimenter measures.
Extraneous variables	Variables that are not controlled by the experimenter, but can have an effect on the results
Independent Groups design	Different participants are used in each of the experimental conditions
Repeated Measures design	The same participants are used in all the experimental conditions.
Matched pairs design	Participants are put into similar pairs, one of the pair performs each condition
Null hypothesis	The prediction that the Independent Variable will have no effect on the Dependent Variable
