## **Electrical Trauma: The Pathophysiology, Manifestations And Clinical Management**

CETRI's research priority is understanding the preinjury factors that predispose someone to neuromuscular problems and determining effective therapies to mitigate this. It is suitable for clinicians in trauma surgery, emergency medicine, plastic surgery, intensive care and burns units and for those with an academic and research interest in the mechanisms and causes of electrical trauma. Eleven of the 22 survivors were contacted, and 10 completed the survey.
