

Wastewater Conference Proceedings - 6th Conference, 1979

National Sanitation Foundation - Ecology and Natural Resources: Proceedings of the Sixth Annual Conference on Wetlands Restoration and Creation, May 19, 1979, Hillsborough Community College, Tampa, Florida: Contents

Water source	Description
Backwater	Wastewater originating from lakes and/or water sources (i.e., lakes, ponds, and ditches);
Bogwater	Wastewater collected from non-backwater sources, such as bottom soils, streams, lakes, surface waters, and laundry soils.
Groundwater (local)	Water from confined groundwater and backwater sources, which is not discharged to a collection system (e.g., wastewater from a residence served with a septic tank or cesspool).
Rain water	Precipitation from air or ground water that has been in contact with precipitation on a surface (e.g., streets, parking lots, and rooftops).
Stormwater	Precipitation from air or ground water that has been in contact with precipitation on a surface (e.g., streets, parking lots, and rooftops). Rain from roofs with regular public access is defined herein as stormwater.
Condensate	Water vapor that is converted to liquid and collected, the most common source in buildings being air conditioning, refrigeration, and steam heating.
Groundwater	Groundwater located near the ground surface in an unconfined aquifer and, therefore, subject to contamination from infiltration of surface sources.
Groundwater	Groundwater collected from drainage areas of building foundations or seeps.
Binder water	Various conditions of water derived originally from backwater, groundwater, rain water, stormwater, condensate, or treated waste. In many cases, reference is not given to distinction of rain water and/or stormwater with wastewater as part of the wastewater collection system due to documented concerns associated with sanitary sewer overflows and/or treatment and hydraulic capacity of the public sewer treatment works. Binder water, however, is the purposeful aggregation of water for use as a non-potable water supply.

Images, text, or other content downloaded from the collection may be freely used for non-profit educational and research purposes, or any other use falling within the purview of This treated water has various potable and non potable applications. This policy covers irrigation and groundwater recharge.

WASTEWATER MANAGEMENT IN THE AUTOMOBILE INDUSTRY

However, biological treatment is recommended since it solves the problem of the wastes in the plant using one treatment system which can be easily controlled. Please check back frequently for updates and more information including the Conference Agenda, Accommodations, and Registration. In: Proceedings of the 5th international conference on wetland system for water pollution control, vol I.

Environmental and Water Resources Conferences & Events

The first proceedings were produced in 1962 and by 1963, the organized meeting was called the Space Congress.

Conference Archive

It also has information on filing a groundwater discharge permit and design criteria for wastewater land treatment. Both potable and non potable reuse applications are in the document.

WASTEWATER MANAGEMENT IN THE AUTOMOBILE INDUSTRY

Topics which range from the more popular computing applications in accounting, statistics, and administration to the less ordinary applications of the computer to the fields of fine arts, medicine, and linguistics, are discussed in this collection of 22 conference papers. Various non potable reuses are covered in this study.

WASTEWATER MANAGEMENT IN THE AUTOMOBILE INDUSTRY

These studies pertain to non potable reuse.

WASTEWATER MANAGEMENT IN THE AUTOMOBILE INDUSTRY

Their policy pertains to potable and non potable reuse.
