Import and export depend upon a number of sophisticated mechanisms, such as active transport, endocytosis, exocytosis, and passive diffusion. Bibliography Includes bibliographical references and index.

Membrane permeability : 100 years since Ernest Overton

The chapters cover various aspects of membrane lipid and protein dynamics, explored using a battery of experimental and theoretical approaches.

Subsequent chapters present readers with up-to-date concepts of membrane structure and function and the challenge they pose for new explorations. However, access to the cell is also fundamental to all cell biology and subcellular biology. This book is designed to celebrate the centennial anniversary in the first chapter of Overton's work.
