

Fundamentals of conducting.

W.C. Brown - Fundamentals of Conducting

2. (See problem 42, Fundamentals of Physics) Two tiny conducting balls of identical mass m and charge q are hanging from identical strings of length L . For small angles, we have that $\tan \theta \approx \sin \theta$. Assuming that $\theta << 1$ (small angle), show that

$$z = \left(\frac{q^2 L}{2\pi \epsilon_0 m g} \right)^{1/3}$$

gives the equilibrium separation z of the balls.
