Social Factors and Eating Behavior

Why are we so concerned with what others eat? The role of familiarity on modeling of eating and food consumption in children. We suggest that people often prefer to eat in groups precisely because it offers them an opportunity to overindulge. Lehto S, Reunamo J, Ruismäki H.

Social facilitation of eating: Effects of social instruction on food intake

If we are eating less food than others, this can make us physically weaker and less fit to survive. Nutritional Needs in Hot Environments. Although de Castro did not say so directly, his hypothesis implied that exposure to food cues drives eating, in what amounts to a simple stimulus-response arc.

Lost your appetite? Try inviting yourself to dinner

These data suggest that how other people influence our food intake reaches beyond the specific eating context to affect pre-meal portion size decisions, suggesting that a fundamental shift is required in our thinking about social influences on eating. Main analysis: effect of social context and serving condition on amount served Participants served themselves larger portions when they ate with their friend, relative to when they ate alone, F 1, 97. Salvy SJ, de la Haye K, Bowker JC, Hermans RC.

Lost your appetite? Try inviting yourself to dinner

Notably, in Study 1, participants who served themselves before the meal selected smaller portions than did those who were able to serve themselves during the meal.

Lost your appetite? Try inviting yourself to dinner

People eat more when they eat in groups. Influence of environmental factors on food intake and choice of beverage during meals in teenagers: a laboratory study.

Social facilitation of eating: Effects of social instruction on food intake

Eating behaviors Similar to our findings for physical activity, there is weak evidence that peers influence eating behaviours of preschoolers. Leone T, Herman CP, Pliner P.
