Free-Radical Chain Polymerization Addition Polymerization -- 10. Each chapter includes learning summaries, self-study tips, glossaries, new sources for additional reading, and new exercises with solutions. Special sections discuss human genome and protonics, recycling codes and solid waste, optical fibers, self-assembly, combinatorial chemistry, and smart and conductive materials.

Increased emphasis on carbon nanotubes, tapes and glues, butyl rubber, polystyrene, polypropylene, polyethylene, poly ethylene glycols , shear-thickening fluids, photo-chemistry and photophysics, dental materials, and aramids. Used books may not contain supplements such as access codes, CDs, etc. Delving into the physical and chemical aspects of polymer processing, each chapter includes a discussion of the relevant background and principles, enabling the scientist to apply synthetic techniques intelligently.
