Does a concrete & steel building require termite treatment?

Building code requirements for termite treatment for new construction outline which control methods should be used in areas where subterranean termite infestations are common. The three differ in colony-building habits and preferred climate.

Subterranean Termites

When a bait system is used, the bait is placed in specially designed bait stations in the soil around the exterior perimeter of a structure. When termites stop feeding, the bait is replaced with untreated wood or other cellulose material.

Termite Proofing: Types, Properties & Materials

Preconstruction Termite Control Termite damage is costly and is seldom covered by homeowner's insurance.

Termite Control: Answers for Homeowners

But, normally, eliminating subterranean termites cost for local issues is around 218 to 868 dollars. The most commonly observed warning signs are the presence of, mud tubes and evidence of damaged wood.
