## Close Relationships: Liking and Loving over the Long Term

This adds to the research literature because the used methodology of Latent Class Analysis LCA offers an empirically-based categorization of persons, we analyze characteristics between these different cyberbullying roles and therefore offer insights for future research and prevention practice. At a rock concert, for example, some may enjoy singing along, others may prefer to sit and observe, while still others may join in a mosh pit or try crowd-surfing.

## The expression patterns and the diagnostic/prognostic roles of PTPN family members in digestive tract cancers

Prevalence and patterns of traditional bullying victimization and cyber-teasing among college population in Spain.

## Friends and Family in Relationship Communities: The Importance of Friendship during the Transition to Adulthood

Mark offered to buy an additional charger to keep one in the kitchen and one upstairs in the bedroom.

## The expression patterns and the diagnostic/prognostic roles of PTPN family members in digestive tract cancers

According to these women, their addiction was a desperate attempt to cope with hopeless and painful situations in their lives. The expression of differentially expressed PTPNs in cancer cell lines were explored using CCLE.

## Bullying at School: The role of family

Alcohol and the Family: Research and Clinical Perspectives pp. Over the past 15 years, in addition to the many studies on children who are bullied, researchers have expanded the study of bullying to include those who bully.

## **Micro, Meso, and Macro Approaches**

Each structure of the system performs a specific function to maintain the orderly operation of the whole Spencer, 1898.

## **Family Problems Harm Young Children**

A rich vein of information can be gained from examining the way such relationships are played out in their natural contexts.

## **Sibling Studies: The good, the bad, and the contradictory**

In the first path, CFA had a negative association with family support at age 14, which had a negative association with depressive symptoms at age 17. *Diskurs Kindheits- und Jugendforschung*, 2014 1 , 61-79.
