

In vitro fertilization and assisted reproduction - proceedings of the 10th World Congress of in Vitro Fertilization and Assisted Reproduction : Vancouver, Canada, May 24-28, 1997

Mondazzi Editore, International Proceedings Division - Chromosome Abnormalities in Embryos Obtained After Conventional In Vitro Fertilization and Intracytoplasmic Sperm Injection

Description: -

Jesus Christ -- Person and offices.
Knox, John, -- 1900-1990
Poetry.
Taoism -- Relations -- Christianity.
Christianity and other religions -- Taoism
Laozi.
Wahhabis
Creation (Literary, artistic, etc.)
Fluid dynamics (Space environment) -- Mathematical models
Multiphase flow -- Mathematical models
Radar -- United States -- Interference
Ionosphere
Remote sensing -- United States
Landsat satellites
Moisture in textiles.
Cotton spinning
Dominican Republic.
Wind tunnels
Reusable space vehicles
Sonic boom
China -- History -- Warring States, 403-221 B.C. -- Anecdotes
Chinese essays (Selections: Extracts, etc.)
Laminated materials
Composite materials
Argentina -- Foreign relations -- 1955-1983.
United States-Japan Cooperative Science Program
Italian literature -- History and criticism
Latin language -- History and criticism
Heat -- Transmission.
Climatology.
Sea ice -- Antarctica.
Jesus Christ -- Poetry.
English poetry -- 20th century -- History and criticism
Human reproductive technology -- Congresses.
Fertilization in vitro -- Congresses.
In vitro fertilization and assisted reproduction - proceedings of the 10th World Congress of in Vitro Fertilization and Assisted Reproduction : Vancouver, Canada, May 24-28, 1997
-In vitro fertilization and assisted reproduction - proceedings of the 10th World Congress of in Vitro Fertilization and Assisted Reproduction : Vancouver, Canada, May 24-28, 1997
Notes: Includes bibliographical references.
This edition was published in 1997

This review focuses on cytoplasmic transfer. Cytoplasmic control of preimplantation development is not a "new" concept, but cytoplasm transfer have been increasingly rapidly applied in humans, with relative success, in the absence of alternative treatments. This review highlights the main milestones in this field, resulting in some publications highlighting the potential dangers (Winston and Hardy, 1990; Hwang et al., 2002; Templeton, 2002) and unpredictable outcomes (Cronin et al., 2002).

Cytoplasmic transfer

The first experiment of cytoplasmic transfer was realized in mouse, in the early eighties (Mugnaioli-Harms, 1982). The author performed cytoplasm transfer on human oocytes in 1987, followed by others in 1988-1989. Since 1987, when Cohen and colleagues announced the first human pregnancy obtained by this technique, the number of publications increased rapidly. This history of poor embryo development and recurrent implantation failure, over many years, has led to the development of various techniques, such as nuclear transfer or in vitro, or even frozen-thawed donor oocytes, into recipient eggs (Hwang et al., 2002; Winston et al., 2002). As live birth of healthy children was obtained by this method was subsequently proposed to restore some deficit in the recipient eggs (Hwang et al., 2002).
