The organization is by content rather than by visualization type. Maps have been created for all kinds of purposes, but the principal reasons are: to document where infrastructure is located; to market services; to manage Internet resources more effectively; to aid searching, browsing and navigating on the Web; and to explore potential new interfaces to different cyberspace media. Occasionally, they are remarkably beautiful, too.

The next section concentrates on the informational organization of the web, as opposed to the physical or topological. Accompanying this growth in the infrastructure, the numbers of users and the available media has been the formation of a new focus for cartography: mapping cyberspace. In that time, many people have helped us.

**Atlas of Cyberspace by Rob Kitchin and Martin Dodge (2001, Hardcover) for sale online**

Several different types of maps are detailed. Accompanying this growth in the infrastructure, the numbers of users and the available media has been the formation of a new focus for cartography: mapping cyberspace.
